Metropolitan Ceramics®
Unglazed Ceramic Quarry Tile

All forms of mass transportation have one thing in common. At their core, they are in the business of efficiently moving large numbers of people between destinations.

The centers of activity in this orchestrated free-for-all can be pounded each day by hundreds and thousands of pedestrians hurrying off to new locations. Be it a station, terminal, depot, or port, these hubs all need a floor covering that can take years of heavy traffic; indoors or out in any kind of weather.

There is one flooring product that has a proven track record of performance day in and day out in these conditions—Metropolitan Ceramics® unglazed quarry tile.

Metropolitan tiles are kiln fired to a point of low absorption, extruded to resist abrasions, 1/2” thick for added durability, and unglazed for a slip resisting surface.

FEATURES & Benefits

- Use Indoors and Out in any Climate.
- Slip Resisting Surface.
- Extreme Durability for Heavy Traffic.
- Will not Bubble-Chip-Melt.
- Resists Grease-Bacteria-Dirty Water.
- Unglazed Surface Won’t Show Wear.
- Can be Used Vertically.
- Resists Chipping and Abrasion.
- Economical.

GREEN at a Glance

- Abundant natural resource.
- Little waste in production.
- No volatile organic compounds.
- Offering decades of performance.
- Safe to discard or repurpose.

Made in the USA
Canton, Ohio

Sizes, Colors, Textures

Sizes options include 4" x 8", 4" x 12", 6" x 9", 8" x 8" and 6" x 6". Many size options are nominal (for example, the 4" x 8" is actually 3 5/8" x 7 5/8") to allow for a grout joint when designing patterns. The most popular size 6" x 6" is (actual size). Tile thickness is 1/2". For specific applications, some products are available by special order in 3/8" and 3/4" thickness. Different size options are available in each product line. See the Metropolitan Ceramics website for complete details.

The grout joint recommended in most instances is 3/8". A 1/4" joint may sometimes be used in some instances, see web site for details. Metropolitan quarry tile is available in a variety of natural earth tones. Some products are reduction fired in the kilns to produce a random shade variation. Many colors are manufactured with little to no shade variation- for a 'single tone' appearance.

A number of products are available with texture for added appeal and to increase slip resisting properties. Details on all products manufactured by Metropolitan Ceramics are available on the Metropolitan Ceramics' website - metroceramics.com.

Trim Pieces

Metropolitan Ceramics offers a number of trim pieces. Shown below are some of the most popular trim options. Please see the Metropolitan web site - metroceramics.com for a complete listing of trim and availability.

Added Slip Resistance

**QUARRYBASICS® XA Abrasive**
- Silicon Carbide Embedded Surface
- Through-the-Body Metallic Additive

**METRO TREAD®**
Raised Tread Design - installed in a checkerboard pattern.

Metro Tread has the added benefit of ease of cleaning. Will not trap debris. Meets the strictest health department regulations - California - without the need for additional drains.

Environmental

Specifications

By ANSI Standard Specification A137.1 Metropolitan Ceramics’ unglazed quarry tile is classified as quarry tile, however, the exceptional technical characteristics noted allow them to be used in virtually any application suitable for ceramic tile. Metropolitan Ceramics’ unglazed tile meets both the ASTM standards, the ANSI A137.1 specification for quarry tile, and Metropolitan internal standards as listed.

Cleaning and Maintenance

Metropolitan quarry tile is easy to maintain and requires only neutral cleaners and no special power washing!

For complete specification and cleaning/maintenance information, including download versions, please visit our web site - metroceramics.com.
